

Chapter – 1: The Wonderful World of Science

- Humans – always curious – surroundings
- Explore surroundings – asking questions – since childhood
- Enter Middle Stage – continue journey – explore, understand – beautiful world
- *Science – thinking, observing, doing – understand world – uncover secrets of universe*
- This – big adventure – ask questions, explore world, understand – working of things
- Most imp. thing – Curiosity – title of book
- Study – tiny sand grains OR huge mountains – leaf of grass OR vast forest – always – something new, exciting - discover
- Look at sky – why – stars shine
- Watch a flower – blooming – how it knows – when to open
- Most wonderful thing – about science – everywhere
 - Depths of oceans to vastness of outer space
 - What's cooking in kitchen to what's happening in playground
- Most groundbreaking discoveries – come from – unexpected places
- Science – giant, unending jigsaw – every discovery – new piece
- Most amazing thing – no limit – discovery – every new piece – more questions
- Sometimes – some pieces – wrong place – need to move – new discoveries – change our understanding
- This book – interesting ideas – many experiments – some things – useful – daily lives
- Start with – our home – planet Earth – only planet known to us – support life – env. – must protect
- Life on Earth – amazing variety – plants and animals – survive, thrive – diff. regions
- Seed – grows into plant – caterpillar – transforms into butterfly – how?
- To grow – need food – India – large, diverse country – fascinating food
- Across country – diff. cuisines – many dishes
- Along with food – water – req. – survival
- Water – delightful substance – ever wonder – how, why – rain
- Water – freeze to become ice – boils to become steam
- What's hot and cold – figuring out – temp. – very imp.
- So many diff. things – around us – paper, metal key, plastic ruler, rubber eraser, magnet, clothes, etc.
- All these things – made of what – are they diff materials – how to separate
- Unending list – ques. – about Earth – BUT – why only Earth – ask ques. – Sun, Moon, millions of stars
- Structure of leaf, how things move, separating materials – each chapter – help with curiosity
- Many ques. – find ans. – yourself – why pen stops working – may be – ink finished
- Test this – open pen – check refill – if empty – you know you guessed it right
- If not empty – you know you guessed it wrong – make another guess – ink dried up
- Test this – try some other exp.
- This way – science works – this method – **scientific method**
- Science – not just – memorizing facts, fig. OR doing exp.
- Science – following step-by-step process – help us – find answers
- Steps –
 - Find something – interesting – you have no idea about
 - Wonder about it – think – ques. about it
 - Quess – possible answer
 - Test this guess – exp. OR more obs.
 - Try to analyze results – actually ans. the ques.
- Scientists – people – follow scientific methods – solve problems
- Anyone – trying – find ans. – ask ques. – in a way – scientists

- Several daily life situations – we apply scientific methods
- This world – full of things – not yet discovered – waiting to be explored
- Learn science well – be curious – obs. surroundings
- Science – never done alone – scientists – work together – often – large teams
- Discover together – more fun
- Enjoy – science journey – never stop asking and wondering
