

Chapter – 1: The Ever-Evolving World of Science

- *Curiosity* – Grade 6 – adventurous journey into science – this grade – continue this journey
- This book – also invitation – to question, perform experiments, explore
- World of science – covers everything – small, large, near, far – cells in a leaf, movement of sun, stars
- This book – new adventures – challenge your thinking, expand knowledge, become explorer
- Exploration – not just discovering facts – BUT – science is a process – a way of thinking that welcomes curiosity
- Get out of classrooms – experience world – act., exp. – interesting, exciting – also serve as – stepping stones – deeper understanding – world
- Exploring science – not only discovery – BUT also responsibility – human act. – linked to what happen in nature
- Also study – role of science – helping – environmental challenges, sustainable world
- Topics – diff. fields of science – phy., chem., bio., etc. – all interconnected
- This book – journey – starts from properties of materials – move on to batteries, lamps, wires
- Also explore – kinds of materials – kind of changes around us
- Also study – heat flow – effects on other things
- Lots of other things – not only changes in materials – BUT also changes in ourselves, other organisms around us
- All the time – Earth evolved – figured out – plants, animals – breathe, eat food – beautifully balanced way
- BUT – what is time – how to measure it – also explored – this book
- Before clocks – lights, shadows – tell time – also helps us to see
- Earth, moon – cast shadows – leads to eclipses – day, night
- Understand this – know – earth's rotation, revolution – consequences of these movements
